

In-Flight Entertainment System

High-Speed. Durable. Seamless.

Built for high-performance IFE platforms, Transcend's embedded-grade SSDs and memory cards offer robust data throughput, shock resistance, and long operational lifespan. These storage solutions are ideal for handling high-resolution media, real-time content access, and multitasking workloads in modern commercial aircraft environments.

Optimized Throughput

Ensures smooth playback of 4K/HD video, real-time data buffering, and responsive user interface across multiple displays.

High Durability

Engineered to withstand vibration, altitude, and temperature extremes common in aviation. Suitable for long-haul reliability.

Multi-Form Factor Support

Available in various flash form factor including 2.5" SSD, M.2, mSATA, CFast, SD and microSD—ensuring integration flexibility across diverse IFE system designs.
